Subject: Fedora 16 containers problem

Upgraded for Fedora 14 to Fedora 16 in a container using you.

After the upgrade I ran yum install upstart and then restarted the container. The container runs but no services start.

When I try to start something I get this:

service crond restart
Failed to get D-Bus connection: No connection to service manager.

What am I missing?

Thanks in advance

i have the some problem

any service show
Redirecting to /bin/systemctl stop sshd.service
Failed to get D-Bus connection: Failed to connect to socket /run/systemd/private: No such file or directory

Fedora 16 with systemd requires the newer vzctl 3.2, older versions have some workarounds that get the container to use upstart. You can grab the latest vzctl from download.openvz.org/utils/nightlies/vzctl/current/

See the vzctl 3.2 changes: wiki.openvz.org/Download/vzctl/3.2/changes
