Hi,

I am creating a new VZ with vzctl create 994 --ostemplate, and it
fails with this kind of error:

```
 ============================================================
==============
$ vzctl create 994 --ostemplate mycustomtemplate
tar:  ./usr/lib/python2.6/dist-packages/IPython/frontend/process/_ _init__.py:
Cannot create symlink to
 `../../../../../../share/pyshared/IPython/frontend/process/_ _init__.py':
Disk quota exceeded
 ============================================================
==============
```

Any idea?

"In July 2005, after several failed attempts to legalise software
patents in Europe, the patent establishment changed its strategy.
Instead of explicitly seeking to sanction the patentability of
software, they are now seeking to create a central European patent
court, which would establish and enforce patentability rules in their
favor, without any possibility of correction by competing courts or
democratically elected legislators."

Hello,

I'm probably stating the obvious, but your question
presents no alternative:

> [...]
> Disk quota exceeded
>
> Any idea?

Ehm... you reached your disk quotum?

Try the vzdq___ commands.

Hope this helps...

-Rick

Or increase the diskspace value in the config you are using with your create command.

TYL,
