Subject: Downgrade from RHEL6 to RHEL5 kernel

Hello,

We are going to downgrade some nodes that are crashing (http://bugzilla.openvz.org/show_bug.cgi?id=2188) to RHEL5.

Would you recommend any easy way? We'd like to keep the host on CentOS 6 but loading RHEL5 kernel.

I tried to install the RHEL5vzkernel with RPM but it asked for mkinitrd. So, I forced but got lot of errors on the next boot.

Thanks.
