Subject: Debian is about to drop support for OpenVZ

Hi,

The Debian Project (www.debian.org) is considering to remove support for OpenVZ, due to lack of maintainers.

If such future compatibility is important for OpenVZ users, please speak up.

www . linux-archive.org/debian-kernel/593583-possible-support-open vz-also-next-version-stable.html

Ben Hutchings (from Debian kernel team) says:

Quote:As a necessary (but not sufficient) condition, you and the OpenVZ project would have to support OpenVZ in the *current* Debian stable release. The last release based on 2.6.32.y was made in March. For our OpenVZ kernel configurations we had to revert all the scheduler fixes made in 2.6.32.29 due to conflicts which we obviously do not have the necessary knowledge to resolve.

It seems to me that the OpenVZ project does not support longterm releases other than RHEL.

Hi,

all information is in the LKLM post you've linked to - thats the situtation.

Ola Lundqvist maybe will test alien RHEL->DEB packages as he explained.

Surely it would be better if someone could port the OpenVZ stuff to the long term kernel like Alexander Gerasiov explained but if no one could do it (and maintain it) or if there are no resources maybe the above solution would be the best guess.

And yes I'am using OpenVZ on Debian for many CT's.

Mario
