Hi. I like configure the heartbeat in two nodes for loadbalanced with ldirectord, ipvsadmin...etc. For redirect the traffic, i exec this command:

Load the modules in proxmox:

loadb1/loadb2:

```
echo ip_vs_dh >> /etc/modules
echo ip_vs_ftp >> /etc/modules
echo ip_vs >> /etc/modules
echo ip_vs_lblc >> /etc/modules
echo ip_vs_lblcr >> /etc/modules
echo ip_vs_lc >> /etc/modules
echo ip_vs_nq >> /etc/modules
echo ip_vs_rr >> /etc/modules
echo ip_vs_sed >> /etc/modules
echo ip_vs_sh >> /etc/modules
echo ip_vs_wlc >> /etc/modules
echo ip_vs_wrr >> /etc/modules
```

Then we do this:

loadb1/loadb2:

```
modprobe ip_vs_dh
modprobe ip_vs_ftp
modprobe ip_vs
modprobe ip_vs_lblc
modprobe ip_vs_lblcr
modprobe ip_vs_lc
modprobe ip_vs_nq
modprobe ip_vs_rr
modprobe ip_vs_sed
modprobe ip_vs_sh
modprobe ip_vs_wlc
modprobe ip_vs_wrr
```

vzctl set 102 --capability net_admin:on --save

vzctl set 103 --capability net_admin:on --save

/etc/init.d/vz restart

But the heartbeat report this error:

Apr 20 16:00:41 loadbd1-mysql heartbeat: [2680]: ERROR: Unable to set scheduler parameters.: Operation not permitted
Apr 20 16:00:41 loadbd1-mysql heartbeat: [2681]: ERROR: Unable to set scheduler parameters.: Operation not permitted
Apr 20 16:00:41 loadbd1-mysql heartbeat: [2676]: ERROR: Unable to set scheduler parameters.: Operation not permitted

I deleted the venet for create the veth. And the error persist.

Can I help me please?

Can install heartbeat in VPS openvz??

Thanks in advanced.

I never got an answer as to what the error is but you can ignore it. I have been getting it EVERY heartbeat startup for about 5 years.

If heartbeat isn't working, it's something else, not this. Let me know more about what is happening and maybe I can help.
