Hello,
What should a 'OpenVZ control panel' do?

I'm creating one simple control panel in PHP, here is the TODO list:
Quote:
» User Profile
» Multiple VPS per user
» Multiple Hardware-Node support
» Reload OS
Limited to 1 reload per 5 minutes
» Reboot VPS
Limited to 1 reboot per minute
» Hostname change
Possibility to change hostname if it's valid (must resolv to VPS ip)
» Bandwidth monitoring (Month, Week, Day, Hour)
» Hostname retreive script
Retreive hostname from host (if it's manually changed using vzctl)
» IP retreive script
Retreive ips from host (if it's manually changed using vzctl)
» Templates retreive script
Retreive templates from host (if we add a template it will appear in control panel in less than 10 minutes)
» Bandwidth retreive script
Retrive bandwidth usage every 15 minutes to avoid big loss when host goes down

This panel runs into an external server, so we don't need LAMP on our Nodes

Some ScreenShoots

For a VPS service of mine, I made a simple one.

Here's a few screenshots:
http://www.opensourcep.com/site/screen/

Ignore the 'thumb' ones - they're just thumbnails for the home page.

I then made a new panel (still in development):
http://www.opensourcep.com/pub/cp2/

Might inspire you a bit

Please *DON'T* "steal" or use those icons...thanks

Jonathon

No, I simply gave you those screenshots for inspiration, I'm not going to give my panels out.

Jonathon
