Hi there,

Please, can someone explain to me what is the difference between the private vs the root directory for each pvid? Looking now at both directories, I don't see any differeces, whatsoever. For each virtual machine vdisk, I have duplicate space on real machine?

Suppose, <veid> is id of your VE.

If this VE is not started files are only in
/vz/private/<veid> and /vz/root/<veid> is empty. After starting VE,
simfs file system is mounted on /vz/root/<veid>.
Simfs file system _reflects_ contents of /vz/private/<veid>.
It's done to confine VE in /vz/root/<veid>.

So, you don't have duplicate space on machine, don't worry!

HTH,
vass.

HI,

yes, i have same issue. but one thing i found i 4 vps is working fine and 4 are not.

and /vz/root/ are empty.
it means simfs is not mounted for 4 vps
what may be the issue and how to fix?

Thank you

Hi Sachin

Could you please explain your issue in more details?

thank you,
Vasily Averin

its fixed.

i tunr off quota in vz.conf and vzctl start vpsid
its working fine now.

Thank you..
