Hi,

I have a problem on one of my VPS.
When I tried to start VPS I receive this error :

Adding IP address(es): 72.55.185.163
/bin/bash: line 386: 1618 Done echo "${ipm}" 1619 Segmentation fault | grep -q '/' /bin/bash: line 386: 1620 Done
echo $ipm 1621 Segmentation fault | grep -q ':' /bin/bash: line 573: 1627 Done echo "${IFNUMLIST}" 1628 Segmentation fault | grep -q -E "^${IFNUM}$" 2> /dev/null /bin/bash: line 608: 1632 Broken pipe ifconfig ${VENET_DEV} 1633 Segmentation fault | grep -q RUNNING 2> /dev/null Shutting down loopback interface: ./network-functions: line 66: 1667 Done echo ${CONFIG##*/} 1668 Segmentation fault | grep -q '[^g]-' ./network-functions: line 66: 1677 Done echo ${CONFIG##*/} 1678 Segmentation fault | grep -q '[^g]-' ./network-functions: line 286: 1682 Broken pipe LC_ALL=C ip -o link show dev $1 2> /dev/null 1683 Segmentation fault | grep -q ",UP" ./network-functions: line 66: 1690 Done echo ${CONFIG##*/} 1691 Segmentation fault | grep -q '[^g]-' /etc/sysconfig/network-scripts/network-functions-ipv6: line 832: 1695 Done(141) ipv6_exec_ip link show dev $device 2> /dev/null 1696 Segmentation fault | LC_ALL=C grep -q "UP" ./network-functions: line 286: 1706 Broken pipe LC_ALL=C ip -o link show dev $1 2> /dev/null 1707 Segmentation fault | grep -q ",UP" ./network-functions: line 66: 1714 Done echo ${CONFIG##*/} 1715 Segmentation fault | grep -q '[^g]-' ./network-functions: line 340: 1720 Done LC_ALL=C ip route list match 0/0

the VPS start but networking not working and this cause VPS unusable !

Thank you

- Segmentation fault -

This may not be a openvz problem but a OS problem

Can you dmesg inside the ct1?
