Subject: using iptables geoip in openvz container

Hello,
is the xtables-addons for iptables (http://xtables-addons.sourceforge.net/),
for example the module geoip to block on a country basis, and the target TARPIT,
not possible in an openvz container?

A provider told me that the above said modules/targets won't work in an openvz container.
Is that really true, or has maybe the provider not managed to get it working?

Thx
