Subject: [PATCH v6 00/10] IPC: checkpoint/restore in userspace enhancements
Posted by Stanislav Kinsbursky on Mon, 15 Oct 2012 15:59:27 GMT
View Forum Message <> Reply to Message

v6:
1) rebased on 3.7-rc1

v5:
1) Several define-dependent compile bugs fixed
2) IPC message copy test updated
3) A couple of minor fixes.
4) Qlogic driver update: rename of its internal SEM_SET define into SEM_INIT
(compile error).

v4:
1) If MSG_COPY flag is specified, then "mtype" is not a type, but message
number to copy.
2) MSG_SET_COPY logic for sys_msgctl() was removed.

v3:
1) Copy messages to user-space under spinlock was replaced by allocation of
dummy message before queue lock and then copy of desired message to the dummy
one instead of unlinking it from queue list.
I.e. the message queue copy logic was changed: messages can be retrived one by
one (instead of receiving of the whole list at once).

This patch set is aimed to provide additional functionality for all IPC
objects,
which is required for migration of these objects by user-space
checkpoint/restore utils (CRIU).

The main problem here was impossibility to set up object id. This patch set
solves the problem in two steps:
1) Makes it possible to create new object (shared memory, semaphores set or
messages queue) with ID, equal to passed key.
2) Makes it possible to change existent object key.

Another problem was to peek messages from queues without deleting them.
This was achived by introducing of new MSG_COPY flag for sys_msgrcv(). If
MSG_COPY flag is set, then msgtyp is interpreted as message number.

The following series implements...

Stanislav Kinsbursky (10):
    ipc: remove forced assignment of selected message
    ipc: "use key as id" functionality for resource get system call introduced

ipc: segment key change helper introduced
ipc: add new SHM_SET command for sys_shmctl() call
ipc: add new MSG_SET command for sys_msgctl() call
glge driver: rename internal SEM_SET macro to SEM_INIT
ipc: add new SEM_SET command for sys_semctl() call
IPC: message queue receive cleanup
IPC: message queue copy feature introduced
test: IPC message queue copy feture test

Subject: [PATCH v6 08/10] IPC: message queue receive cleanup
Posted by Stanislav Kinsbursky on Mon, 15 Oct 2012 16:00:17 GMT
View Forum Message <> Reply to Message

This patch moves all message related manipulation into one function msg_fill().
Actually, two functions because of the compat one.

Signed-off-by: Stanislav Kinsbursky <skinsbursky@parallels.com>

Subject: [PATCH v6 09/10] IPC: message queue copy feature introduced
Posted by Stanislav Kinsbursky on Mon, 15 Oct 2012 16:00:22 GMT
View Forum Message <> Reply to Message

This patch is required for checkpoint/restore in userspace.
IOW, c/r requires some way to get all pending IPC messages without deleting
them from the queue (checkpoint can fail and in this case tasks will be resumed,
so queue have to be valid).
To achive this, new operation flag MSG_COPY for sys_msgrcv() system call was
introduced. If this flag was specified, then mtype is interpreted as number of
the message to copy.
If MSG_COPY is set, then kernel will allocate dummy message with passed size,
and then use new copy_msg() helper function to copy desired message (instead of
unlinking it from the queue).

Notes:

1) Return -ENOSYS if MSG_COPY is specified, but CONFIG_CHECKPOINT_RESTORE is not set.

Do you need to add uapi/ into some of these?

David

Yes, most probably.
Thanks for notice.

>
> Notes:
> 1) Return -ENOSYS if MSG_COPY is specified, but CONFIG_CHECKPOINT_RESTORE is
> not set.

How much could it clean things up if a new ipc/cr.c contained

```
#ifdef CONFIG_CHECKPOINT_RESTORE
struct msg_msg *copy_msg(struct msg_msg *src, struct msg_msg *dst)
{
...
}
#else
struct msg_msg *copy_msg(struct msg_msg *src, struct msg_msg *dst)
{
 return -ENOSYS;
}
#endif
```

and you went on from there to try to remove all the new #ifdefs from the
existing files?
