When creating a guest/vps/container vzquota uses too much time on my system. About 30 seconds to turn it off(?) - Is that normal?

When I comment out the disk quota stuff from the config file, it will just take about 3-4 seconds to create a container.

```
2012-10-29T14:05:49+0100 vzctl : CT 101 : Looking for

I think vzquata are syncing data to disk during this time. In this case it's normal.

You could test this thing, if you calls sync several times during creating.

Thanks.
