I was following the directions found here: wiki.openvz.org/Gentoo_template_creation and ran into a problem when I reached this step: wiki.openvz.org/Gentoo_template_creation#Test

[root@felina ~]# vzctl start 1001
Starting container ...
stat(/vz/root/1001): No such file or directory
stat(/vz/root/1001): No such file or directory
realpath(/vz/root/1001) failed: No such file or directory
Can't umount /vz/root/1001: No such file or directory
stat(/vz/root/1001): No such file or directory
unable to change dir to /vz/root/1001: No such file or directory
Not enough resources to start environment
Container start failed (try to check kernel messages, e.g. "dmesg | tail")
stat(/vz/root/1001): No such file or directory
stat(/vz/root/1001): No such file or directory
realpath(/vz/root/1001) failed: No such file or directory
Can't umount /vz/root/1001: No such file or directory

The host node is running Centos with this kernel:

Linux felina.rpvnetwork 2.6.32-042stab061.2 #1 SMP Fri Aug 24 09:07:21 MSK 2012 x86_64 x86_64 x86_64 GNU/Linux

[root@felina ~]# cat /etc/vz/conf/1001.conf
KMEMSIZE="14372700:14790164"

I checked /vz/root/ and there was no 1001 directory. I rechecked the instructions and don't think I missed anything. Is the /vz/root/1001 directory supposed to be created automatically or do I need to create it somehow?
