I mounted a directory as suggested in:
wiki.openvz.org/Bind_mounts

When I unmounted it the physical server hung, syslog:
myhost kernel: [6828826.156186] BUG: soft lockup - CPU#10 stuck for 66s! [umount:884904]

Is there a safe way to unmount?

vz kernel: 042stab061_2
2.6.32-042stab061.2 (Centos 64)
Thanks
