First time posting. I hope it is okay to "advertise" here. I made a tool to help me with managing multiple OpenVZ hosts. I needed a CLI solution that did not require me to constantly be remoting into all my host boxes and allowed me to do most anything I need to do to all of my hosts and their containers. I am quite proud of the functionality of this tool. The source is a bit dirty, but I am working on cleaning it up. Just thought I would share with the community in case anyone else could find this useful as well.

The GitHub page is github.com/mrkmg/vzcontrol

Hopefully someone finds this as useful as I do.
