How should I correct this? I believe I have everything necessary installed, rpm-python etc....

Quote:
[root@vps-1 ~]# vzyum 103 install yum
exec /usr/share/vzyum/bin/yum -c /vz/template/centos/4/i386/config/yum.conf --installroot /vz/root/103 --vps=103 install yum
There was a problem importing one of the Python modules
required to run yum. The error leading to this problem was:

/usr/share/vzpkgtools/vzrpm43/lib/python2.3/site-packages/rp mmodule.so: cannot open shared object file: No such file or directory

Please install a package which provides this module, or
verify that the module is installed correctly.

It's possible that the above module doesn't match the
current version of Python, which is:
2.3.4 (#1, Mar 13 2006, 07:49:07)
[GCC 3.4.4 20050721 (Red Hat 3.4.4-2)]
