Subject: Changing reserved-blocks-percentage for ploop devices.

Hello,
 after creating ploop container with default settings with ext4 filesystem it allocates 5% of disk space for reserved blocks.
Does anybody know how to change it to 1% and make it permanent for all newly created devices?

To change to 1% you must to run: tune2fs -m 1 /dev/ploop_id_p1
example: tune2fs -m 1 /dev/ploop53231p1
