Subject: Ubuntu 12.10 container has problems with dhcp and default route

Hi guys,

I've an ubuntu 12.10 container, I've set /etc/network/interfaces.tail to:

```
auto eth0
iface eth0 inet dhcp
  up route del default dev venet0
```

I've added the del default venet0 since it's not natted and I've created a veth bridge between vm with dnsmasq running on it.

The problem is that on boot it gets the ip from dhcp but not the default route, running dhclient eth0 manually makes it works fine.

On ubuntu 12.04 container it works without problems.

Any idea on what could be wrong?
