Hello,

Sorry dumb question but I surprised here :
I start to admin a new server and I see a CT with 50Gb, 49148mb in used even if CT really use only 3689 mb.

But Can you clear my doubt, here, the CT is Debian 6.0 i386.
How is it possible ?
I can allocate much memory as I want but the CT will only use close to 4Gb, right ?

vm01(vm)[/]# uname -a
Linux vm01 2.6.32-17-pve #1 SMP Wed Nov 28 07:15:55 CET 2012 i686 GNU/Linux

vm01(vm)[/]# free -m

	total	used	free	shared	buffers	cached
Mem:	49152	49148	3	0	0	45459
-/+ buffers/cache:		3689	45462			
Swap:	4096	0	4095			

Thks
