Subject: Forkbomb in container

Hi everybody,

i'm trying to make hardening on containers to make users unable to damage the host node. I just tried a forkbomb in a container using python

```
import os
while True:
    os.fork()
```

Running htop on my host node, I see that CPU usage is 100% on all cores, even if i setted params like cpuunit, cpus, cpulimit in configuration file.

How can I struggle against this ?

All my containers are precreated debian templates

Thx a lot
