I wrote a few questions in bug tracker, but got no answer.

https://bugzilla.openvz.org/show_bug.cgi?id=2538 - lost data in ploop
http://www.youtube.com/watch?v=Fmyx4rSpqNA
What are some ways to solve this problem? Maybe I'm doing something wrong?

Trim support in ssd -> mdadm(3.2.5) raid 0/1/10 work on RHEL6.4 OVZ kernel?
MOUNT_OPTS="discard" -> It is necessary to specify in the configuration container?
https://bugzilla.openvz.org/show_bug.cgi?id=2546

io stat (iotop for example) does not work in ploopWill it be fixed?
