As I mentioned in my (possible bug) bug report bugzilla.openvz.org/show_bug.cgi?id=2643
I'm no longer able to do live migration to my backup HN because of no aesni capability on destination HN.

```
# vz migrate -r no --live backup-hn 111
```

```
Starting live migration of CT 111 to backup-hn
```

```
Error: Destination cpu does not have aesni
```

```
Insufficient CPU capabilities: can't migrate
```

```
Error: Error: CPU capabilities check failed!
```

```
Error: Destination node CPU is not compatible
```

```
Error: Can't continue live migration
```

```
I'm using vzctl-4.3.1 on both HN's.
```

```
It used to work both ways without any problems and now is working only from no-aesni HN to aesni HN. Is it a known issue? Is there any way to solve this problem?
```
