Hi,

I can not reboot any of running OpenVZ VPses.
Instead of reboot they stop and it is required to boot they from Control Panel.

It is easy to repro it:
loging vis SSH to running VPS
then issue command "reboot"
and server shuts down instead of boot again.

The problem affect all VPSes als well running previously OK as well new ones

I run there SolusVM and it seems problem is since Master Migration

I opened ticket by Solus but the state it is OpenVZ problem.

Done so far (for Solus)

[root@alladyn cache]# cat /etc/issue
CentOS release 5.9 (Final)
Kernel \r on an \m

[root@alladyn cache]# uname -a
Linux alladyn 2.6.18-348.4.1.el5.028stab107.1 #1 SMP Wed Apr 17 19:37:50 MSD 2013 x86_64 x86_64 x86_64 GNU/Linux

[root@alladyn cache]# rpm -qa | grep vzctl
vzctl-lib-3.3-1
vzctl-3.3-1

[root@alladyn cache]# /etc/init.d/vzeventd status
vzeventd (pid 6868) is running...

Any help would be welcome.
Regards
Alex

Check if vzevent kernel module is loaded.

Check if events are coming to vzevent (grep vzevent /var/log/vzctl.log)
