When i reboot my detected server then this error come and I am unable to access VPS SSH
Please suggest solution error as fallows:

[root@ ~]# service network restart
Shutting down interface eth0: [OK]
Shutting down loopback interface: [OK]
Bringing up loopback interface: [OK]
Bringing up interface eth0: [OK]
Bringing up interface venet0: can't find venet kernel module
[FAILED]
and i have checked as per following:-
[root@ ~]# yum install vzkernel
Loaded plugins: fastestmirror, security
Loading mirror speeds from cached hostfile
* base: centos.mirror.serveriai.lt
* extras: centos.mirror.serveriai.lt
* openvz-kernel-rhel6: openvz.mirror.serveriai.lt
* openvz-utils: openvz.mirror.serveriai.lt
* updates: centos.hitme.net.pl
Setting up Install Process
Package vzkernel-2.6.32-042stab078.28.x86_64 already installed and latest version
Nothing to do

and VPS don't run

Yes, well, you do have vzkernel installed, but are you using it? Check into which kernel your server actually booted...

uname -a
cat /boot/grub/grub.conf

..and adjust your grub.conf settings if needed.
