We're running 2.6.32-042stab079.6 & vzctl-4.5.1-1.x86_64.

Every time we start vz, we see:

[142917.016235] ip_tables: (C) 2000-2006 Netfilter Core Team
[142917.045272] Enabling conntracks and NAT for ve0
[142917.045275] nf_conntrack version 0.5.0 (16384 buckets, 65536 max)
[142917.058131] FS-Cache: Loaded
[142917.084612] Registering the id_resolver key type
[142917.084639] FS-Cache: Netfs 'nfs' registered for caching
[142917.124428] ploop_dev: module loaded
[142960.129006] FS-Cache: Netfs 'nfs' unregistered from caching
[142960.155300] FS-Cache: Unloaded

Where does this stuff get loaded? How do we make it stop?

I commented out the IPTABLES lines in /etc/vz/conf/vz.conf and from /etc/sysconfig/vz.

We don't want to load nf_conntrack.
