Subject: Problem with quota

I have a CentOS server with Virtualmin and other software installed.

I installed vzkernel (openvz.org/Quick_installation), I downloaded the template (openvz.org/Download/template/cache) and when I try to create the container I get the next error:

vzctl create 101 --ostemplate ubuntu-12.04-x86_64
vzquota : (error) Quota on syscall for id 101: File exists
vzquota : (error) Native quota is already running for this partition.
vzquota on failed [3]
Creating container private area (ubuntu-12.04-x86_64)
vzquota : (error) Quota is not running for id 101
vzquota : (error) Quota on syscall for id 101: File exists
vzquota : (error) Native quota is already running for this partition.
vzquota on failed [3]
Destroying container private area: /vz/private/101
Creation of container private area failed

What can I do?
