Subject: When Host is 32bits and Guest 64 Bits

Hi!

I´m currently running Debian 6 32 Bits as HOST and had a container (Debian 7 x64) as GUEST.

I´ve read in many forums -but this-, and many said to replace the "init" script under /sbin.

My host can´t run 64bits O.S., that´s why I´m running 32 bits one

Any ideas?

Thanks

If your Hardware Node is only 32-bits capable, you cannot run any 64-bit kernel, and same for any 64-bit executable.
