Subject: *SOLVED* Quotas with cPanel

I have installed the newest cPanel on my CentOS VPS created with openvz. I have run into a problem though. Whenever I go to enable quotas for cpanel, I get the error message below ("No filesystems with quota detected."). Im not sure how to fix this error.

root@ns1 [/scripts]# ./fixquotas
Installing Default Quota Databases.....Done
Quotas are now on
Resetting quota for aawild to 250 M
No filesystems with quota detected.

I did manage to find a thread about this, but it was in Russian. I dont know if it pertains to this.
http://forum.openvz.org/index.php?t=msg&goto=3153&&a mp;a
mp;srch=No+filesystems+with+quota+detected#msg_3153
Any help is appreciated. Thanks!

Have you set quotaugidlimit parameter for VE in question?

I should do
vzctl set <VEID> --quotaugidlimit <QNUM> --save
and stop/start VE.
<QNUM> number of user/groups to quote in VE.

look at manpage on vzctl for detail.

Wow, that worked perfect. So what happens when the VPS gets more users/groups than the quotaugidlimit that I set?

this <QNUM> just limits number of users with active quota. For example, let QNUM=200. You can have 1000 users, but quota will work
only for 200 of them. When you will set quota for 201th user - operation will fail.

[root@localhost ~]# vzctl set 140 --quotaugidlimit 300 --save
Setting quota ugidlimit: 300
Unable to apply new quota values: ugid quota not initialized
Saved parameters for VE 140

[root@localhost ~]# cat /etc/fstab
This file is edited by fstab-sync - see 'man fstab-sync' for details
/dev/VolGroup00/LogVol00 / ext3 defaults 1 1
LABEL=/boot /boot ext3 defaults 1 2
none /dev/pts devpts gid=5,mode=620 0 0
none /dev/shm tmpfs defaults 0 0
none /proc proc defaults 0 0
none /sys sysfs defaults 0 0
/dev/VolGroup00/LogVol01 swap swap defaults 0 0
[root@localhost ~]#

this is true?

Hello,

you need to kernel for vps customer or original server?

for original server is :

[root@localhost ~]# uname -a
Linux localhost.localdomain 2.6.9-023stab040.1-smp #1 SMP Tue Jan 16 00:54:22 MSK 2007 i686 i686 i386 GNU/Linux
[root@localhost ~]#

for vps customer is :
[root@server1 /]# uname -a
Linux server1.domain.com 2.6.9-023stab040.1-smp #1 SMP Tue Jan 16 00:54:22 MSK 2007 i686 i686 i386 GNU/Linux

---
