I organize the speakers for the Bay Area Large-Scale Production Engineering meetup (http : //www.meetup.com/SF-Bay-Area-Large-Scale-Production-Engineer ing/ ;
take a look at the "PAST" tab to see the kinds of events we've had).

For our event on Thursday February 20, 2014, I'm looking for speakers on the topic of "Lightweight Containers" (see http : //www.meetup.com/SF-Bay-Area-Large-Scale-Production-Engineer ing/events/159390872/). I'm looking for talks about Docker, LXC, ZeroVM, OpenVZ, and similar technologies.

As you can see from looking at our past events, I usually pick a topic, and then try to get 2-3 talks on that topic. Talks are usually 20-25 minutes long. This is a technical audience, and they don't appreciate a marketing pitch. They're eager to get into the nuts and bolts of the topic, including use cases, demos, code samples, and architecture.

If you're going to be in the Bay Area then, and would be interested in giving a talk, please let me know here, or (preferably) through meetup.com.

Thanks,
Chris Westin
