Hi.

I'm using RHEL6 042stab084.17 kernel on my server.
When we use the command fstrim I see:
FITRIM ioctl failed: Operation not supported
I'm using mdadm RAID 1 (2 x Intel SSD 320).

In Release Notes for Red Hat Enterprise Linux 6.5 I read
The mdadm tool now supports the TRIM commands for RAID0, RAID1, and RAID10.

Is this feature will be available for OpenVZ kernel?
