Hi all.

I support the project, which requires only an older version of OS.
May be somebody have templates for CentOs 6.2?

Thanks in advance.

You need 6.2 specifically? The contrib section has some older templates in it, you can probably find different versions of CentOS 6 but I don't know about .2.

Seems odd you need a different minor version. No one should be running 6.2 anymore as the reason for minor version updates are security and enhancement, not major changes.

You could try and find a Scientific Linux 6 < 6.2 template, they continue to support each minor version.

For example, going from SL 6.0 to 6.2 would consist of doing 'yum --releasever=6.2 update'. If you don't install the yum-conf-sl6x package, you'll stay on 6.2 indefinitely.

But I don't have a source for an older template.

Worst case, create your own. Refer to https://wiki.openvz.org/Physical_to_container for template creation help.
