We have expirienced problem with creating VPS on our server with folowing configuration:

Host: Linux 2.6.16-026test018.1 i686 (Development OpenVZ Kernel)
VPS: Linux 2.6.17-1.2142_FC4smp

vzctl create 533

Creating VPS private area: /vz/private/533
vzquota : (error) Quota on syscall for 533: File exists
vzquota on failed [3]
vzquota : (error) Quota is not running for id 533
Performing postcreate actions
VPS private area was created

Any ideas?

Is /vz distinguished filesystem or it's just a directory in /?
Do you use usual not openVZ quota on /vz (/) filesystem?

Thanks!

Thanks!

/vz is just a directory.
Yes, there was a quota for /, we disabled it, but there is another error:
vzctl start 532
Starting VPS ...

VPS is mounted
Setting CPU units: 1000
vzquota : (warning) block_hard_limit [0] < block_current_usage [4]
VPS start in progress...

VPS started ok, but I'm not sure that this error message is harmless...

This message means that current usage of disk blocks for VE is greater than limit for it. Just increase limit.
