Hi all,

Icome to ask you becasue, I don't know how to solve my problem.

I've installed an OpenVZ container CenOS 6.
I downloaded asterisk and DADHI and extracted all.....OK
When I do "make" for DADHI,I've this error :

You do not appear to have the sources for the 2.6.32-29-pve kernel installed.
make[1]: *** [modules] Error 1
make[1]: Leaving directory `/usr/src/dahdi-linux-complete-2.10.0+2.10.0/linux'
make: *** [all] Error 2

This message means I need the kernel sources for 22.6.32-29-pve.
right?

where can I find this one?

I found the kernel-header-2.6.32-29-pve, but for debian wheezy....where can I havethe same for cent os 6?

thaank you for your answers.
