Subject: IPTABLE Blocking port 80 with openvz kernel

HI
The system is Centos6.6 after doing a fresh install and setting up CSF firewall all was well until I did this:yum install vzkernel
and rebooted.. uname -r 2.6.32-042stab106.4
Now wget no longer works the moment iptables are enabled. I have disabled csf and just installed basic iptables and it is still the same.
When this first happened I started with a complete Linux install and it has happened again.
Please make suggestions
