Hello All
There is a current openvz kernel with aufs and android patches.

openvz_android_kernel_ebuild.tar.bz2
https://googledrive.com/host/0B35PjbLHNzyqZVNxdHFFckxoNWs ,

A kernel version is bumped from 2.6.32 to 3.26.32 to allow use in the CT0 glibc which require a kernel 3.12+

A livecd with this kernel and android-x86 4.0-r1

I will try to implement a patches from a cells project

http://systems.cs.columbia.edu/projects/cells/build/ regarding a virtual framebuffer for containers. Any help will be appreciated.
