Is it possible to create a custom name to the veth interface while creating the veth interface using following command:
"sudo vzctl set 101 --netif_add eth0 --save"

If not, could someone let me know the way to get the veth interface name as a return value after creating the interface.

Quote:# prlctl list 100 -i |grep veth
net0 (+) dev='veth42a8618e' ifname='eth0' network='Bridged' mac=001C42A8618E dhcp='yes'

vzctl set 102 --netif_add em1 --save
vzctl set 102 --ifname em1 --host_ifname veth0.102 --save
