Is it possible to create a custom name to the veth interface while creating the veth interface using following command:

```
"sudo vzctl set 101 --netif_add eth0 --save"
```

If not, could someone let me know the way to get the veth interface name as a return value after creating the interface.

Quote:# prlctl list 100 -i |grep veth

```
net0 (+) dev='veth42a8618e' ifname='eth0' network='Bridged' mac=001C42A8618E dhcp='yes'
```
