Subject: Unable to start init, probably incorrect template

Hi, I am running OpenVZ and I have about 50 containers but 3 of them cannot be started due to a error: Unable to start init, probably incorrect template

These containers were previously online however for some reason when the were restarted they wont come back. I have checked many tutorials how to resolve this issue however all are outdated because there is no /vz/private/CID/sbin folder. In this folder I have only root.hdd folder.

Also my OpenVZ main folder is located in here: /var/lib/vz

Thanks for any help.
