I'll admit it. I'm new to OpenVZ. I've used Virtuozzo until they effectively voided my perpetual licenses. I am unable to post in Support - every time I try it loops back to the login which I've obviously done.

I need to install Centos 7.3-64 or later but all I find are older precreated. Are those all I can choose from? The manual seems weak in this area.

```
Linux localhost.localdomain 3.10.0-514.26.1.vz7.33.22 #1 SMP Sat Jul 29 14:57:34 MSK 2017
x86_64 x86_64 x86_64 GNU/Linux
```

Your help is appreciated. Just a nudge in the right direct...
