Subject: OpenVZ support for Multiple IPs in Slackware 9/10 - I have it working

Hi,

I'm not sure if anyone is interested - there is no official Slackware 9 / 10 caches (but http://wiki.openvz.org/Slackware_template_creation has an easy method of creating them)... but the problem is the RC scripts provided don't support multiple ips. After some hacking, I have both OpenVZ scripts/dists scripts and the /etc/rc scripts that will work for Slackware 9 & 10 that allows for multiple IP addresses. If there is any interest in getting these put into openVZ, please let me know and I can provide them.
