Subject: How to install kernel headers with a different name?

Hi,

I guess (hope) it's an easy noob question:
How to tell the system[1] that the installed kernel headers
/usr/src/linux-headers-2.6.32-openvz-042stab124.2-amd64 are what it's looking for
(linux-headers-2.6.32-042stab124.2-amd64?

ln -s linux-headers-2.6.32-openvz-042stab124.2-amd64
/usr/src/linux-headers-2.6.32-042stab124.2
doesn't help.

Thank you,
Patsy

P.S. alternative: How to rename the kernel so that it has openvz in its name?

Why?
I have some OpenVZ containers where I want to install iSCSI target but
>apt-get install iscsitarget-dkms results in

DKMS: add completed.
Error! Your kernel headers for kernel 2.6.32-042stab124.2 cannot be found.
Please install the linux-headers-2.6.32-042stab124.2 package

but there is no such, just the slightly different named one with openvz in its name.

[1] uname -a
Linux fs1 2.6.32-042stab124.2 #1 SMP Fri Sep 1 20:42:18 MSK 2017 x86_64 GNU/Linux
