Hi all OpenVZ users,

I freshly installed a openvz-7.0.7-336 server, and found that even though I uninstalled the firewall and cleared all content in /etc/sysconfig/iptables , the iptables still apply some rules to the server. Below is the output that I got. Anyone knows where is the config and how I can remove it completely?

```
# iptables -L -n
Chain INPUT (policy ACCEPT)
target    prot opt source                destination            udp dpt:53
ACCEPT    udp  --  0.0.0.0/0             0.0.0.0/0             tcp dpt:53
ACCEPT    tcp  --  0.0.0.0/0             0.0.0.0/0             udp dpt:67
ACCEPT    udp  --  0.0.0.0/0             0.0.0.0/0             tcp dpt:67

Chain FORWARD (policy ACCEPT)
target    prot opt source                destination            reject-with icmp-port-unreachable
REJECT    all  --  0.0.0.0/0             0.0.0.0/0             reject-with icmp-port-unreachable

Chain OUTPUT (policy ACCEPT)
target    prot opt source                destination            udp dpt:68
```
