For the past few days, the network interfaces in a container aren't loading. When trying to restart the network services, the output shown below is what I get. I've found SOME information online about this but none of it's been helpful. Any suggestions, guidance, or fixes would be greatly appreciated.

Quote:

root@vps [/]# /etc/init.d/network restart
Shutting down loopback interface: [OK]
SIOCGIFFLAGS: No such device
Bringing up loopback interface: Device lo does not seem to be present, delaying initialization.
[FAILED]
Bringing up interface venet0: Device venet0 does not seem to be present, delaying initialization.
[FAILED]
