Hi,

I'm trying to install `openvz-iso-7.0.8-365.iso` on my server.

Attempting a bog-standard installation will eventually lead to a blank, black screen, where it sits for hours, doing nothing at all. I've tried using `nomodeset`, removing `quiet`, updating BIOS and IPMI firmware, using a `netinstall`, etc, etc. Same result each time.

If I try and do a VNC install, that also fails (screenshot: <https://i.imgur.com/VeO8WoC.png>)

Dedicated Server specifications:

Motherboard: X10SL7-F

Processor: Intel Xeon E3-1241v3

Does anyone have any ideas?

Thanks.
