I failed to update OpenVZ 7, as some yum repository links to repo.virtuozzo.com ...

However, the domain - virtuozzo.com - was expired on 2019-06-18 !?
(I hope it is because someone forget to renew it la..)

The domain - openvz.org - will expire on 2019-08-07

Yep, fixed already, some issues with autorenew,
and whois database to be updated a bit later i suppose.

<https://www.whois.com/whois/virtuozzo.com>

Updated Date: 2019-06-21T01:10:54Z

>>> Last update of WHOIS database: 2019-06-20T21:45:31Z <<<

Hope autorenew for openvz.org won't glitch. :)

Anyone else still experiencing issues with repo.virtuozzo.com? Yum is not enjoying it:

One of the configured repositories failed (Unknown),
and yum doesn't have enough cached data to continue. At this point the only
safe thing yum can do is fail

:(

Appears to be fixed now; must have just taken a while to propagate.
