Subject: apparmor inside a container

Hi,

We are using CentOS 6 as host for openVZ, and Ubuntu 16 as guests.
I saw in that post:
https://serverfault.com/questions/319953/apparmor-not-workin
g-ubuntu-11-04-insize-openvz?noredirect=1
that apparmor or seliux and openVZ cannot coexist.

As the post is quite old, do you confirm it is still the same and we cannot install apparmor in an Ubuntu container?

Thanks for your answer.

Dear fvafva,

we had some investigations about apparmor support inside containers,
it was theoretically doable, but it was quite complex task
and finally we decided do not implement this feature.

Thank you,
Vasily Averin
