Hey guys,

Going to the OpenVZ 7.0.12 release repo shows no packages:
https://download.openvz.org/virtuozzo/updates/openvz-7.0.12-281/x86_64/os/Packages/

Wasn't it released yesterday?

-Jordan

Hi Jordan,

here you are: https://download.openvz.org/virtuozzo/releases/openvz-7.0.12-281/x86_64/os/Packages/

Thanks for pointing me in the right direction! The URL I posted was only for future updates to that release?

Yes, i believe files related to hotfixes of the update 12 will be stored there.

Not digged that honestly. "yum update" and that's it.

Do you find the kernel - 3.10.0-1062.4.2.vz7.116.6 - inside yum ?

I do not find it.

After updating to "Virtuozzo Linux release 7.7", the kernel is still 3.10.0-957.12.2.vz7.96.21

Hey ccto,

It does show up when I run yum update: ---> Package vzkernel.x86_64
0:3.10.0-1062.4.2.vz7.116.6 will be installed
