Hell Guys,

I have created a vps with simfs in an openz7 node. I need to convert the vps to ploop. I have used the following command to convert and it seems it is not available in openvz7

vzctl convert 103 --layout=ploop
103: unrecognized option '--layout=ploop'

I have convert my my simfs vps to ploop using the above command in centos 6 node.
