Greetings, I've been using openvz (and virtuozzo) since version 5. It's still my go to solution, and believe me, I've tried them all.

I'm beginning to wonder if OVZ-7 is the end of the road. Is there some plan for OVZ-8? I've heard no official word or even unofficial chatter about OVZ-8 lately, and I'm starting to cast about to make sure there are alternatives, in case this is a dead end.

Can you confirm or deny that there will be a Centos-8 based release of OVZ?

A clear word would do much to give us some much needed peace of mind.

Hi!

At last i do have something to provide you officially:

tomorrow (29.09.2020) there will be a webinar from Virtuozzo and there will be slides about roadmap.

Speakers: director of our RnD and our Product Manager.

Official slides.

The banner for registration (just to get a link, no cost of course) is on openvz.org now, here is the link as well: <https://bit.ly/2Ekkodo>

Hope, that will vanish all the doubts about the future - there will be OVZ8! :)

Have a nice day!
