Subject: What is the latest stable OVZ version?

Hi,

I was a happy user from OVZ6. I could recommend it for any environment. Then OVZ7 came and i was able to use it, although it become more complicated.
I now try to use OVZ9, but it is not stable at all.

- Containers starts with lot of warnings about using deprecated commands from scripts.
- After server boot not all containers starting up. Always random.
- Container restart action freezes and then "forcibly" able to stop container after minuted of wait.

I wonder if OVZ8/9 are production ready or are just unusable public demo? What i understand that there is a "https://www.virtuozzo.com/virtuozzo-hybrid-server/". Is it still OVZ6 or OVZ7 based?

Anyone able to use OVZ in the production and what version?

Current stable version is OpenVz7,
You can download it here:
https://download.openvz.org/virtuozzo/releases/openvz-7.0.18 -283/x86_64/

In general it is an equivalent of Virtuozzo Hybrid Server 7.5 update 3
and you can use its documentation.
https://docs.virtuozzo.com/master/index.html

OpenVz9 is in alpha testing stage currently.

Please feel free to report about any noticed troubles to bugs.openvz.org.

Thank you,
Vasily Averin
