Hello,
Wondering if anyone can post what is needed in Shorewall to allow people from the outside to connect to virtual machines using OpenVZ?

Currently, I can connect to the host fine, however I can't reach any of my virtual machines. I assume this has something to do with configuring the venet0 interface in shorewall to allow packet forwarding. If someone could post their configuration of shorewall under OpenVZ(HOST)I would appreciate it. Below is what I have in my interfaces, policy, rules files for shorewall. Thanks.

/etc/shorewall/interfaces
```
#ZONE   INTERFACE       BROADCAST       OPTIONS
net     eth0      204.83.151.73
```

/etc/shorewall/policy
```
#SOURCE         DEST          POLICY         LOG          LIMIT:BURST
#                                            LEVEL
fw      net     ACCEPT
net     all     DROP
all     all     REJECT
```

/etc/shorewall/rules
```
#SECTION RELATED
SECTION NEW
ACCEPT  net                 fw      tcp     22      -
ACCEPT  net                 fw      icmp    -       -
```

I howto will be great.
I have also problems here getting shorewall run on the Hardware-Node and in a VM.

Best Rene
